

# A Quantum Shift in Data Security

“ PrivateLine DENTAL™ gives me peace of mind that my patients’ data is safe from cyberattacks, insulating me from liability and giving me more time to focus on being the best dentist possible.”

– Greg Biddulph, DMD  
Mountain View Dental Care, Utah

**When your on-premise computers are connected to the web, sensitive patient data stored on your computer network is at risk.**

Most people think the “web” and the “internet” are synonymous. In reality, the web runs on the internet, but the internet is not the web.

PrivateLine DENTAL™ fully prevents cybercriminals from compromising your patients’ private data by keeping it off the web entirely.

## Benefits to your dental practice:

**Makes your data literally inaccessible to cybercriminals.** PrivateLine DENTAL provides multiple layers of protection against data breach by proactively keeping patient information separate from local area networks (LAN), the cloud, and the web.

**Nothing new to learn or manage.** Your dental office has no time commitment or learning curve with PrivateLine DENTAL. Within 24 hours, your practice is registered and patient data is secured on a private ICN server.

**Insured against data breach.** InterComputer technology is so effective that Lloyds of London has underwritten the software and provides full cybercrime coverage for the company and its customers.
